Art Unit: 1746

### **DETAILED ACTION**

## **Drawings**

1. Figures 1A and 1B should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

#### Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

## **IN THE SPECIFICATION:**

On page 1, line 6, after "2000", insert --now U.S. Patent 6,641,948--.

On page 1, line 11, after "09/839,787", insert --, now U.S. Patent 6,720,105,--.

On page 1, line 15, after "09/839,950", insert --, now abandoned,--.

Art Unit: 1746

# Allowable Subject Matter

3. Claims 41-44 are allowed.

4. The following is an examiner's statement of reasons for allowance (these same reasons were set forth in the Office action of April 4, 2003 and are reiterated herein):

Claims 41 and 42 recite that the electrode comprises a "sol-gel" in combination with fluid delivery and removal channels. The term "sol-gel" is interpreted herein as a "metal oxo macromolecular network," as defined in the specification on page 22, line 27. While DE 19820756 and Mercuri et al. in U.S. Patents 6,413,671 and 6,528,199 teach fluid delivery and/or removal channels in combination with transverse acicular pores, none of these references teaches or fairly suggests a metal oxo macromolecular network in combination therewith. Accordingly, claims 41 and 42 are allowable.

Claims 43 and 44 recite that the anodic and cathodic porous regions each comprise a plurality of interconnected mesoporous acicular pores. The art of record, particularly DE 19820756, does not fairly teach or suggest these limitations. DE '756, while teaching acicular pores, does not fairly suggest that these pores are "interconnected" (herein, "interconnected" is interpreted as being connected *within* the substrate, not on the surface thereof). Accordingly, claims 43 and 44 are allowable.

Art Unit: 1746

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan Crepeau whose telephone number is (571) 272-1299. The examiner can normally be reached Monday-Friday from 9:30 AM - 6:00 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Randy Gulakowski, can be reached at (571) 272-1302. The phone number for the organization where this application or proceeding is assigned is (571) 272-1700. Documents may be faxed to the central fax server at (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
